

ARTIFICIAL INTELLIGENCE & DATA SCIENTIST

AI Builder, Researcher, Creator

I'm an AI & Data Science student who loves turning ideas into working systems. From computer vision and intelligent models to robotics and creative tech, I build, experiment, and learn by making things that actually work.

CAREER JOURNEY

Sihati

Data Extraction Developer & Graphic

Meknes, Morocco
Sep 2025 - Present

Data Extraction: Built scripts and workflows to extract and structure raw sources into clean, usable datasets for the product.
Design & Video: Produced brand visuals and video content for the health platform.

NebrasAI

Co-Founder & Creative Director

Meknes, Morocco
Sep 2024 - Present

Co-founded an AI startup: shaped product direction and led the full brand and design identity across products and communication.

MowajihAI

Lead Designer (Co-Founder)

Meknes, Morocco
Jan 2023 - Sep 2024

Co-founded an AI-driven student-orientation platform and led its product design and brand identity.

Twareg Esports

Freelance Graphic Designer

Meknes, Morocco
Aug 2025 - Jan 2026

Delivered brand assets, logo, and visual identity work for an esports brand (long-term) and an education client.

Twareg Esports

Freelance Graphic Designer

Meknes, Morocco
Jan 2023 - Sep 2024

Delivered brand assets, logo, and visual identity work for an esports brand (long-term) and an education client.

Leadership & Community

Computer Science Club — FSM (UMI)

President • Lead Designer • Former Communications Manager

Meknes, Morocco
Jul 2022 - Oct 2026

- President (since Nov 2024):**
 - Lead a 21-person board and 460 active members, setting the club's direction and running its events end to end.
 - Run planning, delegation, and follow-through across events, workshops, and competitions.
 - Represent the club with faculty, sponsors, and other student organizations.
- Lead Designer (since Jul 2022)**
 - Own the club's visual identity and keep it consistent across every platform we publish on.
 - Build and maintain the club's visual identity: logo, color system, typography, and layout rules.
 - Design posters, social posts, event branding, and certificates.
 - Adapt the identity per platform (Instagram, LinkedIn, print, web) without breaking.
- Responsible communications (Nov 2023 - Nov 2024)**
 - Ran the club's content pipeline and built the tools behind it WhatsApp bot, website, and email campaigns.
 - Owined the posting workflow: calendar, copywriting, scheduling, and publishing across channels.
 - Built a WhatsApp chatbot to automate announcements and member questions.
 - Built and maintained the club website.

Projects

Brain Tumor MRI Classification — ML, DL & Vision-Language Models

Built an end-to-end MRI brain-tumor classifier: optimized handcrafted features (GLOM, LBP, DWT, HOG), benchmarked 8+ ML models, and compared them to CNNs and a LoRA-fine-tuned VLM (F1 = 0.92-0.95).
Python - PyTorch - Scikit-learn - XGBoost - Hugging Face

Real-Estate Recommendation Chatbot (RAG)

Built a full-stack property platform with a RAG chatbot over Llama 3 (Ollama, Spring AI) and a vector database for grounded, hallucination-free recommendations.
Next.js, Spring Boot, PostgreSQL/pgvector.

Sign Language Recognition System

Real-time gesture and action recognition pipeline combining MediaPipe landmarks, YOLO localization, and LSTM temporal modeling.
Python, YOLO, MediaPipe, TensorFlow/Keras.

Social-Graph Community Detection (Louvain, Leiden & GNN)

Compared modularity-based algorithms with a Graph Neural Network approach on large social graphs (Pokec, YouTube) to power a community-driven recommender.
Python, NetworkX, PyTorch Geometric.

Asteroid Sprint — Arcade Game with AI Hand-Gesture Controls

Shipped a webcam-controlled arcade game using MediaPipe hand tracking (steer / shield / repulse gestures); released publicly on itch.io under GPL-3.0.
Python, pygame-ce, ModernGL, OpenCV.

Solar System VR — Interactive Space Exploration

Immersive VR experience for exploring planets and orbital mechanics in real time; built with the CS Club and showcased at the Moroccan Gaming Expo.
VR, game development, 3D

Intelligent Agriculture System — Weather Station, ET0 Prediction & Auto-Irrigation

Built an IoT + ML pipeline that forecasts reference evapotranspiration (ET0) from time-series weather-station sensor data (Punman-Month & MJ) to drive automated, water-efficient irrigation.
Python, Time-Series, Machine Learning, IoT.

Where I'm Based?

0x0red.me

My Work, online.

See my track record

Let's build something together.

I'm looking for my next AI & Data Science internship.

Bring the challenge, I'll bring the curiosity, code, and coffee.
